SUMMARY

Cleared offensive security professional holding the OSCP and GPEN, currently pursuing OSED. As a Cyber Threat Intelligence Analyst, tracks adversary tactics, techniques, and procedures (TTPs) against MITRE ATT&CK, bringing a practical understanding of how real threat actors operate to adversary emulation and red team work. Background in vulnerability management across 400+ Windows enterprise endpoints and Army intelligence systems, with ongoing hands-on work in binary analysis, reverse engineering, and firmware research.

CERTIFICATIONS

OSED (In-Progress)	OSCP (2026)
GIAC GPEN (2025)	CompTIA Pentest+ (2024)
CompTIA CySA+ (2024)	CompTIA Security+ (2020)

SKILLS

Offensive Security: Network & web application penetration testing • Active Directory attacks • Privilege escalation • Pivoting & tunneling

Threat Intelligence: Adversary TTP analysis • MITRE ATT&CK • Cyber kill chain • Analytic reporting (ICD 203 / 206)

Tools: Metasploit • Burp Suite • Nmap • Ligolo-ng • Ghidra • WinDbg • Cutter

Programming & Scripting: Python • C • PowerShell • Bash

Hardware & Embedded Systems: Firmware extraction & analysis • PCB-level troubleshooting • Schematic analysis • Component diagnostics

Intelligence Systems: DCGS-A family intelligence ground systems • Software Defined Radios (SDRs) • Tactical C4ISR platforms

TECHNICAL PROJECTS

Hardware Security Research & Firmware Analysis **04.2026 – Present**

- Conducting research involving device interface analysis, firmware extraction, embedded system evaluation
- Extract and analyze firmware artifacts, performing static binary analysis using Ghidra, Cutter, and debugging tools to understand program behavior and identify potential exploitation paths
- Evaluate embedded components and hardware attack surfaces during offensive security experimentation

Binary Analysis & Exploitation Research **06.2024 – Present**

- Applied reverse engineering techniques including binary inspection, debugging, and vulnerability identification to evaluate software behavior and potential exploitation paths.
- Conducted exploitation-focused testing across network, system, and hardware attack surfaces

Offensive Security Tool Development **06.2025 – 08.2025**

- Developed Python-based security tooling to automate reconnaissance and offensive security workflows, including a multithreaded port scanner for service discovery
- Created utilities supporting tunneling setup, file transfer automation, clipboard automation, and Docker-based payload generation workflows to improve efficiency and repeatability during testing

PROFESSIONAL EXPERIENCE

Cyber Threat Intelligence Analyst – Booz Allen Hamilton

03.2026 – Present

- Conduct Scientific & Technical Intelligence (S&TI) research and analysis supporting DoW and Intelligence Community (IC) mission requirements
- Produce technical intelligence assessments aligned with ICD 203 and ICD 206 standards, translating technical findings into concise intelligence reporting
- Apply offensive security concepts, cyber kill chain methodologies, and vulnerability analysis techniques to analyze cyber capabilities, system architectures, and adversary technologies
- Perform technical evaluations of computer and network technologies, software capabilities, and military systems to identify potential risks and operations impacts

Network & Security Operations Lead – U.S. Army

10.2023 – 12.2025

- Directed analysis and remediation of software vulnerabilities across 400+ Windows enterprise endpoints, leveraging Trellix VMS to identify attack surfaces, assess risks, and minimize operational exploit vectors
- Supervised deep-dive audits of operating system internals and configuration data to isolate architectural weaknesses, misconfigurations, and software vulnerabilities across unit networks
- Developed automated data pipelines and analytics tooling, optimizing telemetry collection to reduce diagnostic lifecycles and Mean Time to Repair (MTTR) by 20%
- Triaged 1,000+ advanced system-level failures, identifying root causes for complex cryptographic breakdowns, encryption faults, and kernel-level access issues
- Created and enforced secure system baselines and engineering documentation to standardize operational security, mitigating data exfiltration risks and protecting sensitive software environments

Military Intelligence Systems Maintainer/Integrator – U.S. Army

08.2022 – 10.2023

- Sustained and integrated intelligence processing systems supporting classified Windows Server and Red Hat Enterprise Linux environments
- Resolved hardware and software faults on tactical intelligence platforms, ruggedized computing systems, and C4ISR architectures
- Performed system diagnostics involving hardware components, operating systems, network services, and mission applications
- Provisioned and integrated DCGS-A family intelligence processing and ground station systems
- Supported mission applications including SDR-enabled platforms, tactical communications systems, and antenna systems
- Conducted hardware repair, component diagnostics, schematic interpretation, soldering, and electrical testing to identify system faults

EDUCATION

Bachelor of Science: Cybersecurity & Information Assurance – Western Governors University (2024)
